

Q2
cont

an optical modulation device that modulates a light flux emitted from the light source according to image information;

a projection unit that magnifies and projects the light flux modulated by said optical modulation device; and

a transparent plate formed on a light emitting surface of said optical modulation device, the transparent plate formed substantially the length of the light emitting surface of said optical modulation device.

Sub
§ 1

Q3

18. (Thrice Amended) A projector comprising:

a light source;

an optical modulation device that modulates a light flux emitted from the light source according to image information;

a transparent plate bonded to a light emitting surface of said optical modulation device, the transparent plate bonded substantially the length of the light emitting surface of said optical modulation device;

a power supply unit;

an interface circuit;

a control circuit that controls the optical modulation device; and

an outer casing that accommodates the light source, the optical modulation device, the transparent plate, the power supply unit, the interface circuit, and the control circuit.

19. (Amended) A projector comprising:

a light source;

an optical modulation device that modulates a light flux emitted from the light source according to image information;
